Re: November 2007 Monthly
Report

Dear Mr. Ryan:

This letter serves as the monthly progress report for November 2007, in accordance with Section X, Paragraph 29 of the RD/RA Consent Decree for the Tronox site, in Soda Springs, Idaho.

November Activities

The calcine cap and landfill facilities were inspected in November. The gates were closed and locked. The landfill has minimal water and was not pumped.

The 10-acre pond was inspected and the water level was measured. The gates to the pond are closed and locked and the fence is in good condition. The 10-acre pond currently contains about 8 inches of water, measured at the south end of the pond.

Results of the October 2007 sampling event were received back from the lab in late November, without the results from well KM-8 due to an error in processing the sample in the lab. We are currently awaiting those results, and a small percentage of the results will exceed holding times. These data will be noted in future reporting. The data results from the October 2007 sampling event included a lower detection limit for arsenic and no unexpected occurrences or concentrations are noted.

December/January Activities

During the months of December and January, Tronox will continue to monitor the cap, landfill and the 10-acre pond, weather permitting. Tronox expects that EPA will provide a Statement of Work to address the findings of the document prepared by the Army Corps. of Engineers. Results of the October 2007 sampling event will be appended to the database following review and validation.

No community relation activities are planned for this period.
